

**Before you
buy a reversing
camera have
you considered...**

- 1 Where the monitor will sit?**
Monitors on the dash interrupt your forward vision and are affected by heat and ambient light.
- 2 Does the camera have the required 'field of view' for the application?**
Cameras for caravans should have a field of view narrow enough so that traffic behind is clearly visible in the monitor.
- 3 How easy is it to install?**
Does the kit include all components with easy to follow installation instructions, and has it been designed for easy low cost fitting?

Aussievan **Easy RearView** models available:

BD-21 - For Caravans, Campers and Motorhomes
BD-22 - For Cars, SUVs and 4WDs

Do You Know What's Behind You?

Easy RearView

Camera and Monitor Model: BD-21

For Caravans, Campers and Motorhomes

- Boom mounted 14.5cm (5.6inch) LCD colour monitor (monitor dash stand for bus or large motorhome use optionally available)
- Infrared night and day reversing camera with 90° vision
- DIY installation - complete kit included

NRMA Insurance recommended in “Are you driving blind?”

27th July 2006 that:

Reversing cameras should:

Have a large field of view and be mounted so that the rear bumper bar is in view

Be able to operate in low light

Reversing camera displays should:

Be large enough to clearly view obstacles and be visible in both low light and bright conditions

Be mounted so they are easily viewable when reversing, but don't impede normal vision

Available as standard
